Education

Syracuse University

Master of Science in Computer Engineering

Syracuse, NY

Aug 2023 – May 2025

Experience

Software Engineer

Syracuse University

Jun 2025 – Present

- Architected **agenticAI workflows** for **multi-step automation**, cutting **internal task execution** time by 3x (Cursor, Python, LangChain, Kubernetes).
- Built **RAG-based** pipelines integrating vector stores and **multi-agent coordination**, reducing **manual handoffs** by 40% (Python, AWS, Lambda).
- Managed **distributed compute** environments with **dashboards** for real-time **agent metrics** tracking and **production issue** reproducibility (SLURM, CloudWatch, MLflow).
- Implemented **CI/CD pipelines** and **Kubernetes** deployments in **Agile sprints** for agentic system development, mentoring peers on internal tooling adoption. (GitHub Enterprise, GitOps)

Software Engineer

Indian Space Research Organisation (ISRO), Bangalore, India

Jan 2022 – Jun 2023

- Designed and deployed **scalable microservice backends**, handling more than 1M events/day with sub 200ms latency (Go Mux, FastAPI, Kubernetes, Kafka), powering **realtime anomaly detection** for satellites.
- Engineered **OpenSearch-powered monitoring dashboards** on the **central log server**, enabling faster operational **visibility, debugging**, and **Root Cause Analysis** (Python, FastAPI, React, Grafana).
- Implemented **CI/CD pipelines, automated tests, and observability hooks**, reducing deployment errors by **30%** (Terraform, CloudFormation, ArgoCD, GitHub Actions, Docker) enabling **agile deployments**.
- Optimized **Kubernetes** cluster networking by configuring **Load Balancer, CNI**, and **proxy layers** to support efficient **service-to-service routing** without exposing underlying pods.
- **Led Agile teams** delivering **Kubernetes-based services**, standardizing architecture, **mentoring** junior engineers, and improving developer onboarding.

DevOps Engineer

Nuviso Networks, Bangalore, India

Jun 2020 – Dec 2021

- Developed **internal frameworks and REST APIs** for **network data pipelines**, reducing **processing time** by at least 25% across data services (Python, Go, Docker, ECS).
- Implemented **monitoring and logging frameworks** with **automated testing**, improving uptime and traceability for **network device dashboards** (Prometheus, Grafana, Pytest).
- Supported **CI/CD workflows** in a **monorepo** using GitHub Actions and Bazel, managing containerized deployments and artifact versioning to accelerate delivery cycles by 20%.
- Mentored peers on **internal tooling and pipeline optimizations**, fostering adoption of best practices.

Personal Projects

JarVish: <https://github.com/vishwa419/JarVish>

Oct 2025 – Present

Jarvis clone, powered by **GPT, deepagents, subagents, RAG** and **MCPs** as **microservice**. Powering end to end daily workflow automation with observability (LangChain, LangGraph, Qdrant, Docker, Opik).

AGENTIC DOCKER: https://github.com/vishwa419/Kitty_containers

Aug 2025 – Sep 2025

Built a modular **agentic-AI system** for task orchestration, integrating GPT, MCP and RAG to automate container deployments (Python, LangGraph, LangChain, Qdrant).

MLOPS: https://github.com/vishwa419/MLOps_Inference

Jun 2025 – Aug 2025

GitOps-driven ML pipeline for automated data validation, feature store, model training, deployment, and monitoring across environments (Python, BentoML, MLflow, Docker, Grafana, Great Expectations, Feast).

Technical Skills

Languages: Python, Go, Java

Build & CI/CD: GitHub Actions, Buildkite, Jenkins, Bazel, Gradle, CI/CD pipelines, artifact management (Artifactory, Docker Registries, GitHub Packages), caching strategies, MergeQueue concepts

Cloud & Orchestration: Kubernetes, Docker, Terraform, AWS (EKS, ECS, Lambda), kafka, Spark, Flink, Airflow

Monitoring & Observability: Prometheus, Grafana, CloudWatch, logging & alerting frameworks

Developer Tooling: Internal frameworks, developer productivity tools, automation scripts, standardization of workflows
